

It is not right if a VRS provider restricts its customers from using its equipment to access the services of other VRS providers. Deaf and Hard of Hearing customers. The key word is Interoperability. We have different pagers - handheld, pocket, and etc... they are able to communicate with each other with NO PROBLEM. that should go the SAME THING with VRS and point to point calls -- all interoperability. Thank you for letting me to make comments about this issue.
